Hasnet PrintHub Investor Pitch Pack

Date: April 25, 2026

Prepared by: Hasnet ICT Solution

1) One-Line Thesis

Hasnet PrintHub turns printing points into secure, low-operator, mobile-money-first kiosks where payment is enforced before print, enabling scalable multi-kiosk rollout across Zanzibar.

2) Problem We Solve

1. Manual print shops lose revenue through unpaid prints and weak reconciliation.
2. Operator dependency limits uptime and scale.
3. Multi-branch oversight is weak without centralized device/payment visibility.
4. Street/campus locations struggle with stable power and secure kiosk access.

3) Product Snapshot

Hasnet PrintHub is a full stack platform:

1. Customer app: scan QR, upload PDF, choose print options, pay, collect print.
2. Admin backend: pricing, devices, incidents, refunds, customer experience controls.
3. Edge agent on Raspberry Pi: local print dispatch, printer telemetry, heartbeat.
4. Payment policy gate: print is blocked until confirmed payment.

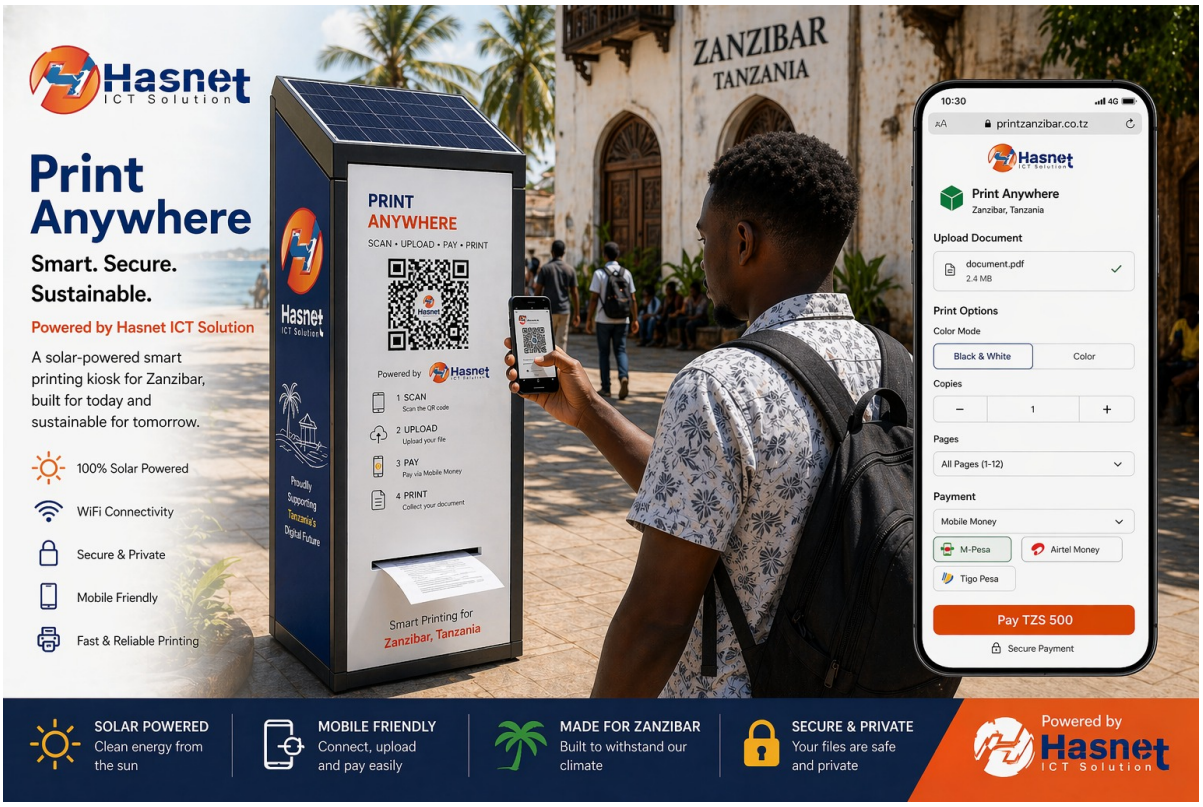
4) Visual Mockups (Current Concept Pack)

These are your current concept visuals from `mockup/`:

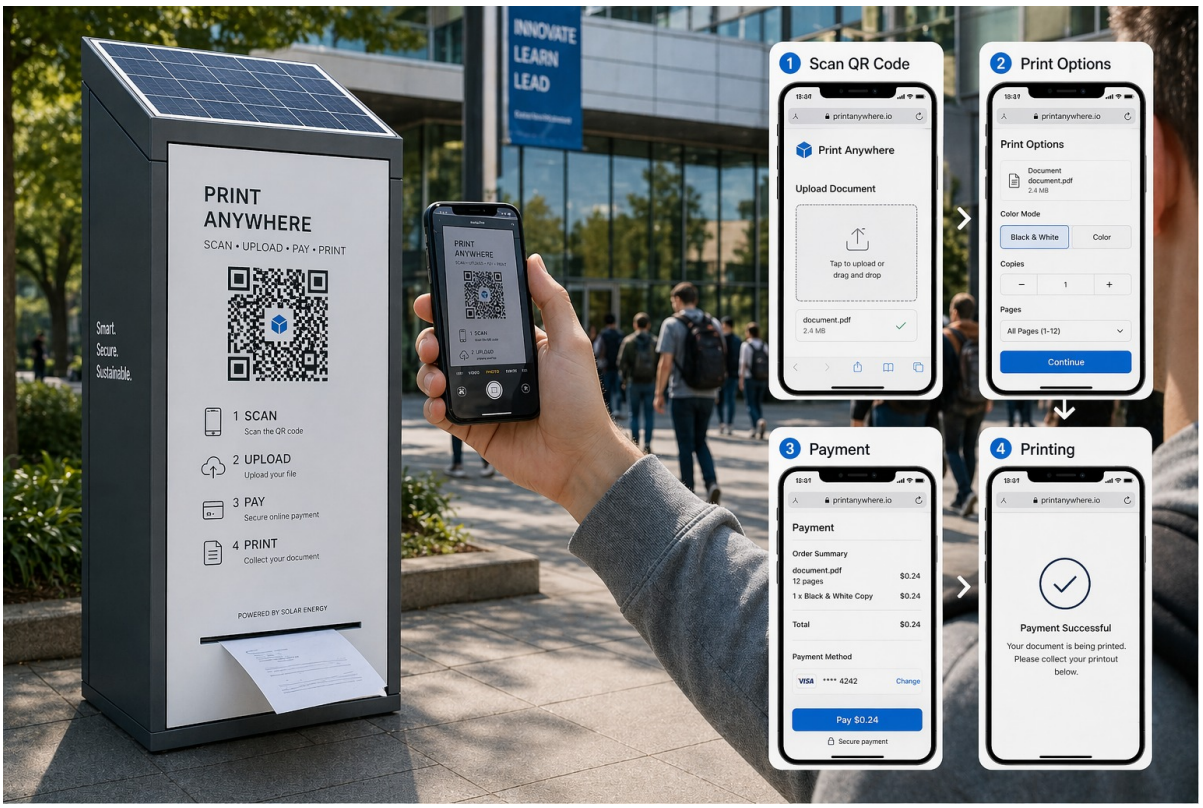
4.1 Kiosk Technical Concept

4.2 Real-World Placement Example

4.3 Zanzibar-Branded Experience Concept



4.4 Customer Journey (Scan -> Upload -> Pay -> Print)



5) How Transactions Flow

1. Customer scans kiosk QR.
2. Customer uploads document and selects print options.

3. System calculates quote server-side.

4. Customer pays via mobile money.

5. Backend verifies payment.

6. Edge agent receives only paid jobs and submits to CUPS.

7. Job status and receipt are exposed to customer/admin views.

6) Why This Is Investable

1. Clear control policy: no payment, no print.

2. Multi-kiosk architecture already in place (`DEVICE_CODE`-scoped heartbeats/jobs).

3. Local-first reliability for kiosk environments.

4. Operational tooling already built (provisioning scripts, runbooks, test suite).

5. Branded UX now aligned to Hasnet palette and support footer.

7) Current Build Status (As of 2026-04-25)

1. Admin auth foundation and protected routes implemented.

2. Multi-kiosk onboarding docs/template implemented.

3. Hotspot + QR workflow implemented and needs live-field validation on Pi.

4. Backend regression tests previously passing (`106 passed` from latest handoff run).

5. Branding refresh applied to admin and customer apps.

8) Near-Term Execution Plan (90 Days)

1. Finalize expanded RBAC (`super_admin`, `admin`, `technician`, `monitor`).

2. Complete real printer telemetry parity (identity, online/offline, actionable errors, consumables where supported).

3. Add incident email alerts for downtime and printer thresholds.

4. Validate QR + hotspot captive flow in live Zanzibar kiosk conditions.

5. Pilot in 1 to 3 live locations, then replicate via profile-based rollout.

9) Commercial Model (Investor View)

Primary revenue options:

1. Per-page margin share.

2. Monthly SaaS + support fee per kiosk.

3. Hybrid model (base fee + transaction percentage).

Optional upsides:

1. Institutional contracts (schools, airports, offices).

2. Kiosk sponsorship/branding inventory.

3. Managed operations subscriptions.

10) Funding Use (Template You Can Fill Before Meeting)

1. Hardware rollout: kiosk builds, printer stock, spares.
2. Operations: field installation, maintenance team, support.
3. Product: telemetry hardening, alerts, analytics, QA.
4. Compliance/legal: registration, IP protection, contracts.
5. Sales: pilot acquisition and institutional partnerships.

11) Suggested Ask Slide (Editable)

1. Amount sought: `TZS` _____.
2. Runway target: ___ `months`.
3. Milestones tied to funds:

- __ live kiosks,
- __ monthly transactions,
- uptime target __%,
- payment-to-print success __%.

12) Investor Data Room Checklist

1. Product brief and architecture diagram.
2. Demo flow video/screenshots.
3. Latest milestone handoff and test evidence.
4. Pilot rollout plan and site criteria.
5. Unit economics sheet (`docs/C2B Charges.xlsx` + margin model).
6. Registration/compliance pack (see legal doc in this repo).
7. Team and operating SOPs (deployment, incident, payment reconciliation).

13) Strategic Positioning

Hasnet PrintHub is positioned as print infrastructure for Zanzibar: practical, auditable, low-touch operations with payment integrity and kiosk-scale repeatability.
